

## The TAAS Fabulous 50 Program

It is a set of 4 events spread across a calendar year (one for each season) in which a beginner to astronomy learns to locate 50 of the most prominent night sky objects, including stars, constellation and asterisms.

The Fabulous 50 list is divided into groups by season. Each season has its own collection of objects.

This program is designed for those new to astronomy trying to understand the layout of the nighttime sky and how to navigate to specific constellations or for those curious folks who just want to know what astronomy is all about.

All the details about the TAAS FAB 50 program are available on the society's web page
